

C++ Assignment Solutions | Fundamentals of Programming -1 | Week2

✓ 1 Add comment

1. Take 2 integers input and print the greatest of them

Input 1: a = 5 b = 7

Output 1: second number 7 is the largest.

Solution:

```
1  #include <iostream>
2
3  using namespace std;
4
5  int main() {
6      int num1, num2;
7      cout << "Enter first number:";
8      cin >> num1;
9      cout << "Enter second number:";
10     cin >> num2;
11     if (num1 > num2) {
12         cout << "First number " << num1 << " is the largest";
13     } else {
14         cout << "Second number " << num2 << " is the largest";
15     }
16     return 0;
17 }
```

2. Given the radius of the circle, predict whether numerically the area of this circle is larger than the circumference or not.

Input 1: radius = 4

Output 1: Area is greater than circumference.

Explanation: area = $3.14 * 4 * 4 = 50.24$ unit²

Perimeter = $2 * 3.14 * 4 = 25.12$ unit

Therefore area > perimeter.

Solution:

```
1  #include <iostream>
2
3  using namespace std;
4
5  int main() {
6      int radius;
7      cout << "Enter the radius : ";
8      cin >> radius;
9
10
11     float area = 3.14 * radius * radius;
12     float circumference = 2 * 3.14 * radius;
13     if (area > circumference) cout << "Area is greater than c
14     else cout << "Circumference is greater than area." << end
15     return 0;
16 }
```

3. Any year is input through the keyboard. Write a program to determine whether the year is a leap year or not. (Considering leap year occurs after every 4 years)

Input 1: 1976

Output: yes

Input 2: 2003

Output: no

Solution:

```
1  #include <iostream>
2
3
4  using namespace std;
5
6  int main() {
7      int year;
8      cout << "Enter a year: ";
9      cin >> year;
10
11     // leap year if perfectly divisible by 400
12     if (year % 400 == 0) {
13         cout << year << " is a leap year.";
14     }
15     // not a leap year if divisible by 100
16     // but not divisible by 400
17     else if (year % 100 == 0) {
18         cout << year << " is not a leap year.";
19     }
20     // leap year if not divisible by 100
21     // but divisible by 4
22     else if (year % 4 == 0) {
23         cout << year << " is a leap year.";
24     }
25     // all other years are not leap years
26     else {
27         cout << year << " is not a leap year.";
28     }
29
30     return 0;
}
```

4. Given the length and breadth of a rectangle, write a program to find whether numerically the area of the rectangle is greater than its perimeter.

Input 1: length = 5 breadth = 7

Output 1: Area is greater than perimeter.

Solution:

```
1  #include <iostream>
2
3
4  using namespace std;
5
6  int main() {
7      int length, breadth;
8      cout << "Enter the length and breadth of the rectangle respectively: ";
9      cin >> length >> breadth;
10
11     int area = length * breadth;
12     int perimeter = 2 * (length + breadth);
13     if (area > perimeter) cout << "Area is greater than perimeter.";
14     else cout << "Perimeter is greater than area.";
15     return 0;
16 }
```

5. Write a program to input sides of a triangle and check whether a triangle is equilateral, scalene or isosceles triangle.

Input : side1 = 5 side2 = 4 side3 = 4

Output: This is an Isosceles triangle.

Solution:

```
1  #include<iostream>
2
3  using namespace std;
4
5  int main() {
6      int side1, side2, side3;
7
8      cout << "Please Enter Three Sides of a Triangle = ";
9      cin >> side1 >> side2 >> side3;
10
11     if (side1 == side2 && side2 == side3) {
12         cout << "This is an Equilateral Triangle";
13     } else if (side1 == side2 || side2 == side3 || side1 == side3) {
14         cout << "This is an Isosceles Triangle";
15     } else
16         cout << "This is a Scalene Triangle";
17
18     return 0;
19 }
```

6. If the marks of A, B and C are input through the keyboard, write a program to determine the student scoring least marks.

Input 1: A = 23 , B = 34 , C = 71

Output : A scores the least marks

Solution:

```
1  #include <bits/stdc++.h>
2
3
4  using namespace std;
5
6  int main() {
7      cout << "Enter marks of the students : ";
8      int a, b, c;
9      cin >> a >> b >> c;
10
11     if (a <= b && a <= c)
12         cout << "A scores the least marks";
13
14     else if (b <= a && b <= c)
15         cout << "B scores the least marks";
16
17     else
18         cout << "C scores the least marks";
19
20     return 0;
21 }
```

7. Given a point (x, y), write a program to find out if it lies on the x-axis, y-axis or at the origin, viz. (0, 0).

Input 1: 2 0

Output 1: the point lies on the x - axis.

Solution:

```
1  #include<iostream>
2
3
4  using namespace std;
5
6  int main() {
7      float x, y;
8      printf("Enter the x-y coordinates of the point : ");
9      cin >> x >> y;
10
11     if (x == 0 && y == 0)
12         cout << "The point is on the origin.";
13     if (x == 0 && y != 0)
14         cout << "The point lie on the y-axis.";
15     if (x != 0 && y == 0)
16         cout << "The points lie on the x-axis.";
17     if (x != 0 && y != 0)
18         cout << "The points lie on the plane.";
19     return 0;
20 }
```

8. Given three points (x1, y1), (x2, y2) and (x3, y3), write a program to check if all the three points fall on one straight line.

Input 1: x1 = 1 , y1 = 2 , x2 = 2 , y2 = 3 , x3 = 3 , y3 = 4

Output 1: All 3 points lie on the same line.

Solution:

```
1  #include <iostream>
2
3  using namespace std;
4  int main() {
5      float x1, y1, x2, y2, x3, y3, slope1, slope2;
6
7      cout << "Enter points (x1, y1)" << endl;
8      cin >> x1 >> y1;
9
10     cout << "Enter points (x2, y2)" << endl;
11     cin >> x2 >> y2;
12
13     cout << "Enter points (x3, y3)" << endl;
14     cin >> x3 >> y3;
15
16     slope1 = (y2 - y1) / (x2 - x1);
17     slope2 = (y3 - y2) / (x3 - x2);
18
19     if (slope1 == slope2) {
20         cout << "All 3 points lie on the same line";
21     } else {
22         cout << "All 3 points do not lie on the same line";
23     }
24
25     return 0;
26 }
```

9. Write a C++ program to input any character and check whether it is the alphabet, digit or special character.

Input 1: ch = '9'

Output 1: digit

Solution:

```
1  #include<iostream>
2
3
4  using namespace std;
5
6  int main() {
7      char ch;
8      cout << "Enter any character : ";
9      cin >> ch;
10
11     // Alphabet checking condition
12     if ((ch >= 'a' && ch <= 'z') || (ch >= 'A' && ch <= 'Z'))
13         cout << ch << " is an Alphabet";
14     } else if (ch >= '0' && ch <= '9') {
15         cout << ch << " is a Digit";
16     } else {
17         cout << ch << " is a Special Character";
18     }
19     return 0;
20 }
```

10. Predict the output of below code

```
1  #include<iostream>
2
3
4  using namespace std;
5  int main() {
6      int a = 500, b, c;
7      if (a >= 400)
8          b = 300;
9      c = 200;
10     cout << "value of b and c are respectively " << b << " and " << c << endl;
11     return 0;
12 }
```

Solution:

value of b and c are respectively 300 and 200
